

PIYUSH PRASAD

ASPIRING CLOUD & DEVOPS ENGINEER

piyush.piyushprasad.in · +91 93242 36673 · linkedin.com/in/ppiyushhhh · github.com/ppiyushhhh

001 SUMMARY

IT professional with hands-on experience in IT Service Management and a strong transition into Cloud and DevOps engineering. Skilled in designing and deploying production-ready infrastructure on AWS EC2 with CI/CD pipelines, Nginx reverse proxy, and Linux-based environments. Experienced in server-level security, monitoring (Prometheus, Grafana), and automation via GitHub Actions. Focused on scalable, secure, observable, and DevSecOps-driven systems.

002 EXPERIENCE

Runtime Solutions

Dec 2024 – Present

IT OFFICE ASSISTANT

- Managed end-to-end ITSM ticket lifecycle including incidents, service requests, and escalations across multiple locations using ManageEngine ServiceDesk Plus.
- Maintained SLA compliance by prioritizing critical issues, minimizing downtime, and ensuring timely resolution.
- Administered IT asset lifecycle for laptops, desktops, access points, and biometric devices.
- Coordinated with internal teams and external vendors to resolve hardware, network, and system issues within SLAs.
- Supported daily IT operations including ticket logging, categorization, and escalation handling.

Credence Infotech

Feb 2022 – Oct 2024

IT SERVICE MANAGEMENT CONSULTANT

- Delivered ITSM operations aligned with ITIL best practices, supporting incident, problem, and change management.
- Acted as coordination point between technical teams and stakeholders to ensure smooth service delivery.
- Monitored service performance and maintained adherence to defined operational standards and client SLAs.
- Contributed to process improvement initiatives to enhance service efficiency and customer satisfaction.
- Provided operational support and consultation to improve IT service quality and system reliability.

003 PROJECTS

DevOps CI/CD Deployment — AWS, Nginx & Cloudflare

kamleshprasad.xyz

- Designed a CI/CD pipeline using GitHub Actions to automate deployment of a React application.
- Deployed and hosted on AWS EC2 (Ubuntu) with Nginx as reverse proxy and production web server.
- Managed domain routing and DNS through Cloudflare; automated deploys via SSH and GitHub Secrets.
- Configured domain email with Cloudflare Email Routing + Gmail SMTP and SPF/DKIM/DMARC records.

Production-Ready Deployment on AWS EC2 with Monitoring & Security

In Progress · Live Project

- Deployed a production-grade React + Node.js app on AWS EC2 with Nginx reverse proxy and HTTPS via Certbot.
- Hardened server with UFW firewall, Basic Auth, Nginx return 444, rate limiting, and DDoS protection.
- Built monitoring stack with Prometheus, Grafana, and Node Exporter for CPU, memory, disk, uptime, network.
- Integrated Trivy vulnerability scanning inside CI/CD workflows (DevSecOps).

004 SKILLS

AWS (EC2, S3, IAM) · Linux (Ubuntu) · GitHub Actions · Nginx · CI/CD · Prometheus · Grafana · Node Exporter · Trivy · SSL/HTTPS · UFW · Rate Limiting · Vulnerability Scanning · ManageEngine ServiceDesk Plus
